

# SAVE THE DATE

Thursday, March 17, 6:30-8:30 PM

## Lake Spokane Association

Annual Meeting

Lakeside Middle School Auditorium

### Feature Presentation

## Jack Nisbet

Local Author and Historian

## ‘Reshaping A River’

**In the Century between the building of Spokane House in 1810 and the construction of the Little Falls, Long Lake and Nine Mile Falls dams, the lower Spokane River underwent drastic changes while somehow retaining much of its basic character. This slide presentation will use stories, fur trade journals, maps and period artwork to explore how that river relates to the plane where we live today**

Following this presentation, a number of local experts and representatives will be available in a one-on-one format to answer questions and provide information of interest to local residents. Topics include The Stevens County Shoreline Master Plan, Avista Nine Mile Dam Project, Aquatic weed abatement and Aquatic Herbicides, City of Spokane Combined Out-flow Projects, Spokane River Toxic Task Force, Blue-green Algae monitoring, Ground Water Studies, Boat-in Camping, Tall Pines Park, Sheriff Dept, Park Ranger topics and Spokane River Keeper Projects.
